

# RAiO

## RA8875

### Character/Graphic TFT LCD Controller

### *Application Note*

Version 1.5

June, 28, 2013

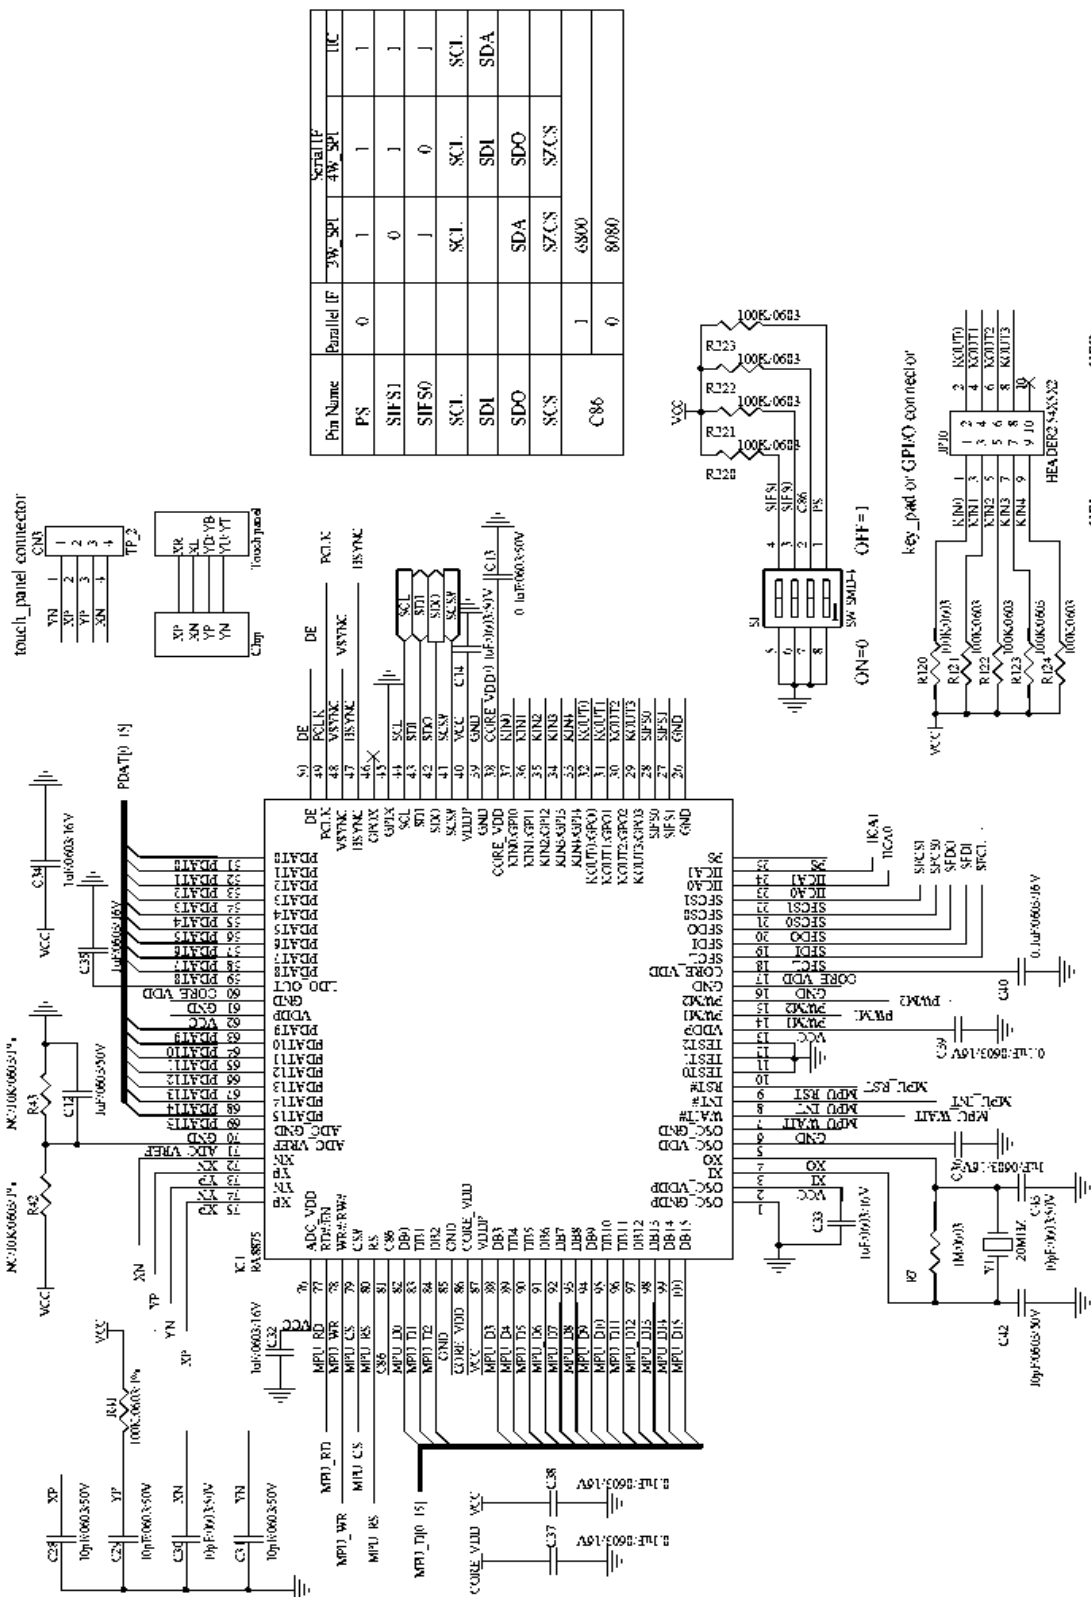

**RAiO Technology Inc.**

©Copyright RaiO Technology Inc. 2011

Update History		
Version	Date	Description
1.0	May, 03, 2011	First Release
1.1	May,09,2011	Schematic 2 update ,initial code update
1.2	June,22,2011	Schematic 2 update
1.3	July,11,2011	Add chapter 6.appendix
1.4	Nov,30,2011	All schematic update, add serial IF,serial flash program circuit.
1.5	June,28,2013	Schematic 3 update ,initial code update

<b>Chapter</b>	<b>Contents</b>	<b>Page</b>
1. Application Circuit .....		4
2. Initial Code.....		7
3. Display on Sequence.....		15
4. Sleep Mode Sequence .....		16
5. Display RAM pure data write example .....		18
6. Appendix .....		19

## 1. Application Circuit

### Figure 1-1

## GENITOP FONT ROM

20PIN FOR GT23L16U2W/GTL24T3Y/GT23L24M1Z/GT23L32S4W

Option

Non mount if program flash

Figure 1-2

8PIN FOR GT21L16T1W

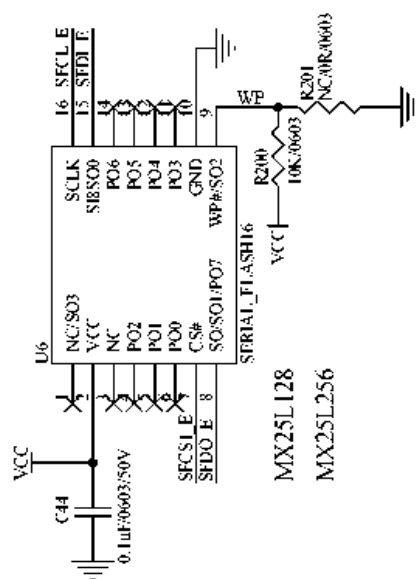

For external programmer serial flash

※(Please refer to the appendix a)

## GRAPHIC SERIAL FLASH

DMA mode from serial flash to display

MX25L16  
MX25L32  
MX25L64

Normally operation : Short

Program flash : Open

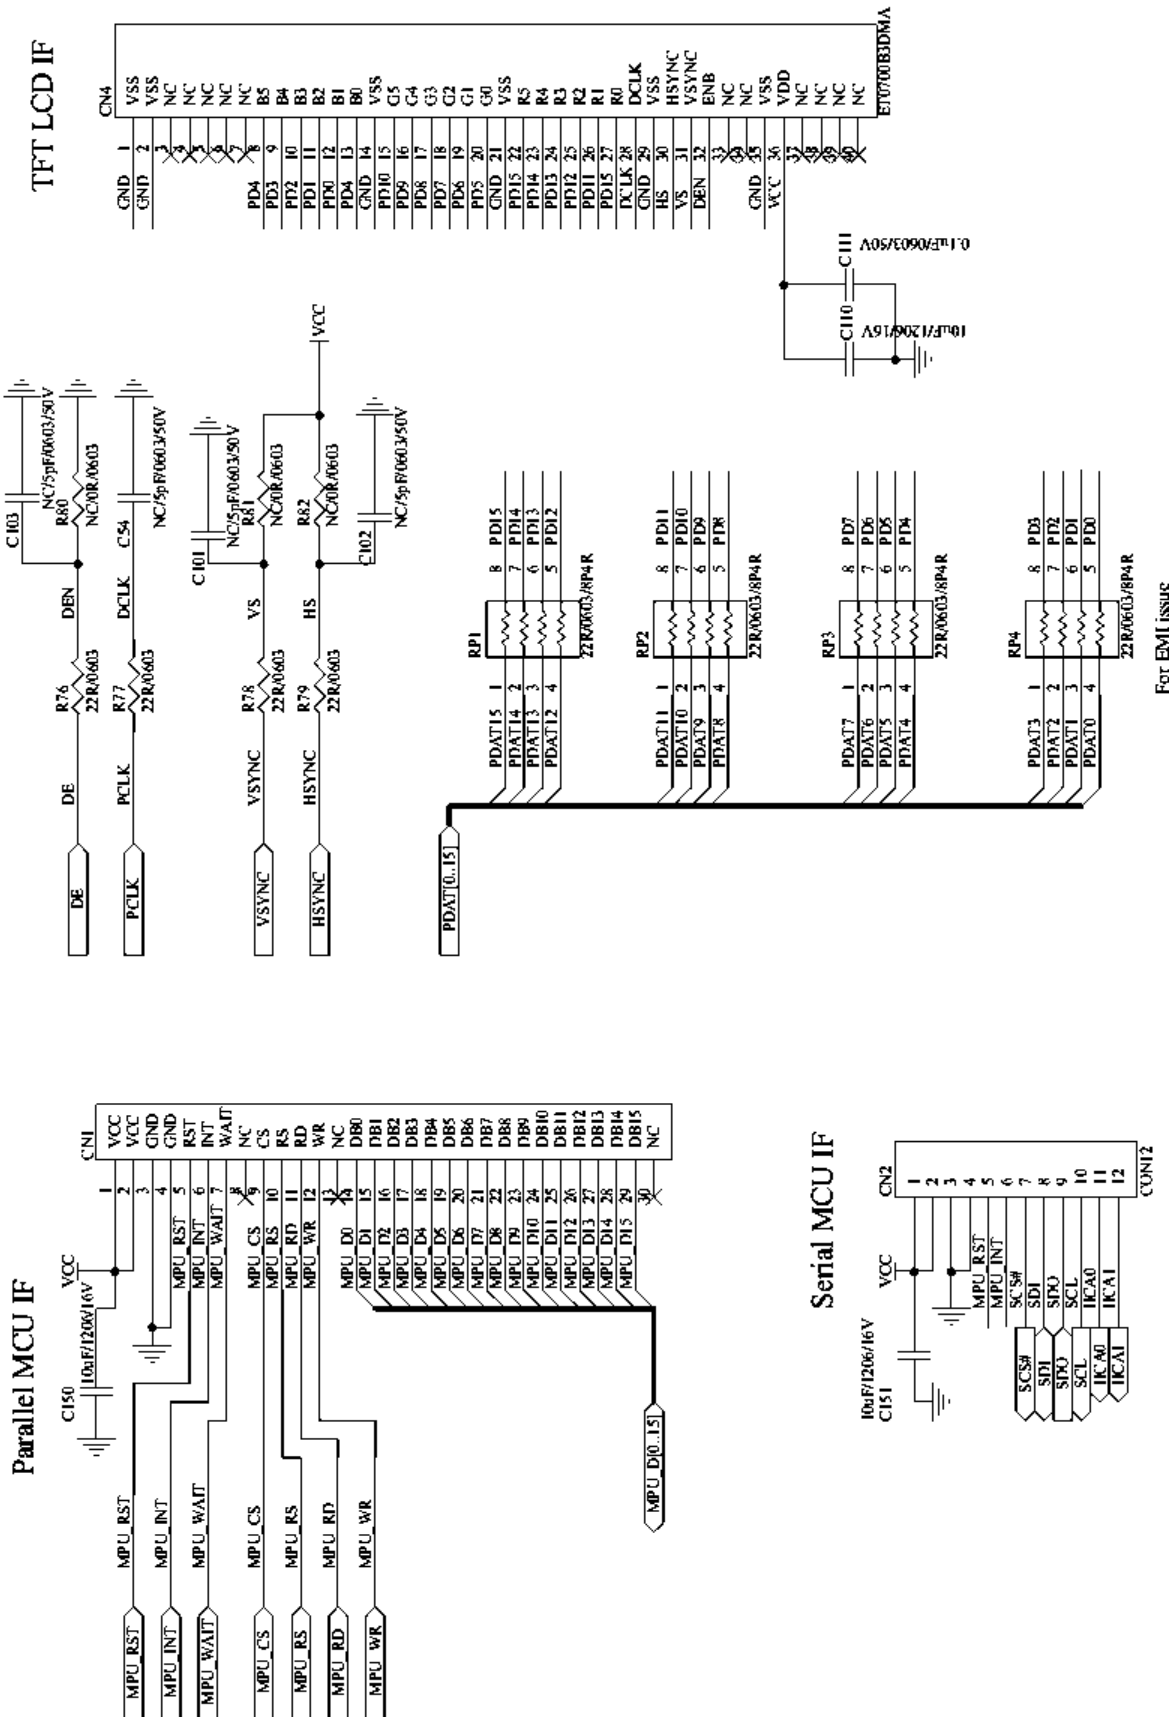

Figure 1-3

## 2. Initial Code

```
void RA8875_PLL_ini(void)

}
```

### 3. Display on Sequence

**Figure 3-1**

## 4. Sleep Mode Sequence

Enter Sleep :

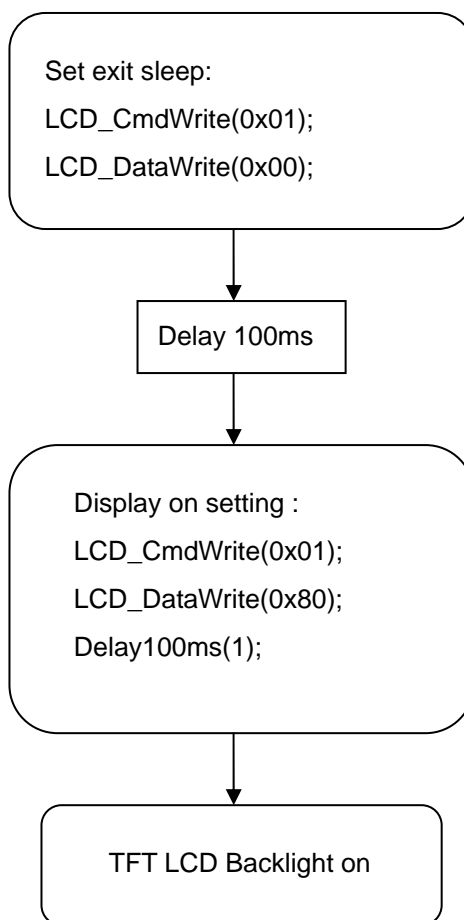

**Figure 4-1**

**\*Attention:**

We suggest to confirm your TFT panel could be disable when the RA8875 enter sleep, to avoid **liquid crystal polarization**.RAiO shall not be held liable for any damages about TFT panel ,when customers use sleep mode incorrect !

**Exit Sleep :**

**Figure 4-2**

## 5. Display RAM pure data write example

Include RA8875\_subroutine.c first , then refer the code below.

### If MCU 8 bit interface :

```
Graphic_Mode( ); //set to graphic mode
XY_Coordinate(0,0); //set write cursor position
LCD_CmdWrite(0x02); //set CMD [02h] before data write
for (i=384000;i>0;i--)
{ LCD_DataWrite(0xf8); // write color red data
  LCD_DataWrite(0x00);
}
```

### If MCU 16 bit interface :

```
Graphic_Mode( ); //set to graphic mode
XY_Coordinate(0,0); //set write cursor position
LCD_CmdWrite(0x02); //set CMD [02h] before data write
for (i=384000;i>0;i--)
{ LCD_DataWrite(0xf800); } // write color red data
```

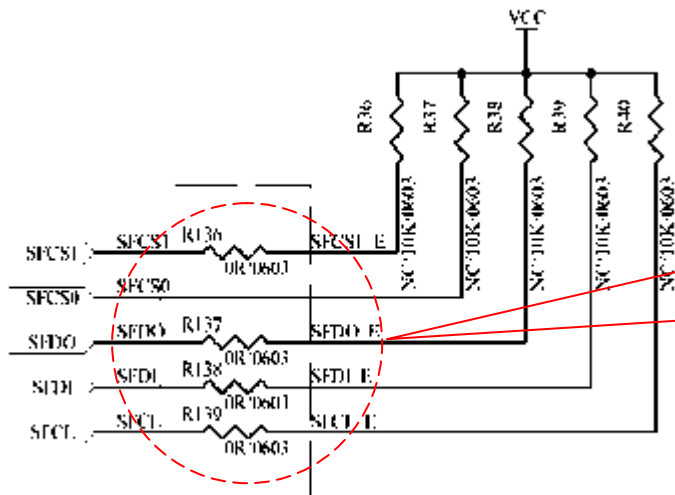

You could download some example code and RA8875 subroutine on the website :

[www.raio.com.tw](http://www.raio.com.tw)

## 6. Appendix

### a. How to program the Serial Flash Memory by the external programmer?

If the advance circuit is already designed by the LCM factory as the following picture1 and picture2, just leading the related pins of the serial flash out to the connector and then the user will be able to program the picture data(\*.bin) by the external memory programmer. Please refer to the following picture3.

Picture 1

For external programmer serial flash

Picture2

Picture3
